Research

I am an information theorist with broad interests in theoretical aspects of computer science and engineering, including information processing, inference, privacy, security, and distributed learning.

- Information Theory: I provide nonasymptotic coding schemes and analyses for fundamental problems in information theory and network communications.
- Compression and Privacy for Distributed Learning: I employ information-theoretic techniques (specifically, channel simulation) to compress privacy mechanisms, and solve various canonical tasks in distributed analytics and federated learning.
- Security and Watermarking: I design novel watermarking schemes that are distributionally robust against attacks, applicable to effective protection and detection of content from generative AI models.
