Research

I am an information theorist with broad interests in computer science and engineering, including information processing, inference, privacy, security, and distributed machine learning.

- **Information Theory and Communications**: I provide nonasymptotic coding schemes, low-complexity algorithms and theoretic analyses for fundamental problems in information theory and network communications.
- **Compression and Privacy for Distributed Learning**: I employ information-theoretic techniques (specifically, *remote source generations*) to compress privacy mechanisms, and solve various canonical tasks in distributed analytics and federated learning.
- **Security and Watermarking**: I design novel watermarking schemes that are distortion-free to original texts and distributionally-robust against attacks, applicable to effective protection and detection of content from generative AI models.
